ANALYTIC SUBJECT INDEX

Bethe lattices
– Multifractal nature of cluster size distributions on— - Djordjevic 160 (1989) 43
Boltzmann equation (see *Poiseuille flow, plane*) 160 (1989) 395
Bose–Einstein condensation (see *Paragas, ideal*) 160 (1989) 386
Burnett distribution (see *Poiseuille flow, plane*) 160 (1989) 395

Cellular automata, inhomogeneous
– A geometrical interpretation of the chaotic state of inhomogeneous deterministic cellular automata - Hansen and Roux 160 (1989) 275
Chaotic dynamical systems
– On the effects of an uncertainty of the evolution law in dynamical systems - Crisanti et al. 160 (1989) 482
Chaotic state of cellular automata
– A geometrical interpretation of the chaotic state of inhomogeneous deterministic cellular automata - Hansen and Roux 160 (1989) 275
Cluster size distribution
– Multifractal nature of—s on Bethe lattices - Djordjevic 160 (1989) 43
Colloidal dispersions
– The shear-thinning behaviour of—. I. Some theoretical considerations - Dhont et al. 160 (1989) 195
– The shear-thinning behaviour of—. II. Experiments - van der Werff et al. 160 (1989) 205
Complex sine-Gordon equation (see *Multicomponent nonlinear integrable systems*) 160 (1989) 235
Conditional distribution method (see *Polar fluids*) 160 (1989) 157
Contact angle, visual measurement (see *Liquid–vapor interface*) 160 (1989) 166
Continuous spectrum systems (see *Poincaré's theorem*) 160 (1989) 351
Couette flow, plane (see *Melting point depression, shear-induced*) 160 (1989) 87
Couette flow, plane (see *Sheared fluids*) 160 (1989) 53
Critical clusters
– Swendsen–Wang simulation of Ising spins and a precise definition of— - Alexandrowicz 160 (1989) 310
Crumpled geometries (see *Ising models, metastable*) 160 (1989) 503

Derivative Schrödinger equation (see *Multicomponent nonlinear integrable systems*) 160 (1989) 235
Dislocation–point defect dynamics
– —in two-dimensional anisotropic liquids: new aspects of melting - Vigren and Holz 160 (1989) 442
Dynamics of correlations (see *Vlasov equation, generalized*) 160 (1989) 471

Eden clusters
– Scaling properties of—in three and four dimensions - Devillard and Stanley 160 (1989) 298

Electronic system, 2D
– A generalized Vlasov equation - Santana et al. 160 (1989) 471
Erratum
– ERRATUM to Physica A 141 (1987) 211, Light scattering studies of disparate mass gas mixtures: helium–xenon - Schaink and Wegdam 160 (1989) 117
– ERRATUM to Physica A 158 (1989) 449, Thermal heterotic strings - Álvarez and Osorio 160 (1989) 119
Evolution law of dynamical systems
– On the effects of an uncertainty of the evolution law in dynamical systems - Crisanti et al. 160 (1989) 482
Extended irreversible thermodynamics (see *Melting point depression, shear-induced*) 160 (1989) 87
Extended irreversible thermodynamics (see *Sheared fluids*) 160 (1989) 53

Fluctuations (see *Smectic-A–crystal transition*) 160 (1989) 98
Fluids, polar
– Statistical mechanical theory of polar fluids for all densities - Zakharov and Aero 160 (1989) 157
Freezing/killing transformation (see *Ising spins*) 160 (1989) 310

Gap equation (see *Quantum field theory of melting*) 160 (1989) 181
Generating function (see *Lorentz gas, lattice*) 160 (1989) 225
Getmanov equation (see *Multicomponent nonlinear integrable systems*) 160 (1989) 235

Hamiltonian structure (see *Vlasov–Einstein equation*) 160 (1989) 213
Hard-sphere dispersions (see *Colloidal dispersions*) 160 (1989) 205

Impurity pairing (see *Ising model, frustrated*) 160 (1989) 148
Initial condition, precision of (see *Evolution law of dynamical systems*) 160 (1989) 482
Interface, liquid–vapor
– A visual measurement of contact angles in a molecular-dynamics simulation - Nijmeijer et al. 160 (1989) 166
Intermittent band switching
– Phase-length distributions in— - Post et al. 160 (1989) 321
Irreversibility (see *Poincaré's theorem*) 160 (1989) 351
Ising model, frustrated
– Low-temperature impurity pairing in the frustrated 2D Ising model - Stošić and Stanley 160 (1989) 148
Ising models, metastable
– Metastable Ising models in crumpled geometries - Lee 160 (1989) 503
Ising spins
– Swendsen–Wang simulation of—and a precise definition of critical clusters - Alexandrowicz 160 (1989) 310
Isotropic Heisenberg spin chain (see *Multicomponent nonlinear integrable systems*) 160 (1989) 235

Light scattering, static (see *Polyelectrolytes, salt-free*) 160 (1989) 135
Linear integral equation
– —s and multicomponent nonlinear integrable systems II - van der Linden et al. 160 (1989) 235
Liquid crystals
– Weak crystallization theory of smectics - Kats et al. 160 (1989) 98

Liquids, 2D anisotropic
– Dislocation–point defect dynamics in two-dimensional anisotropic liquids: new aspects of melting - Vigren and Holz 160 (1989) 442
Liquid–vapor interface
– A visual measurement of contact angles in a molecular-dynamics simulation - Nijmeijer et al. 160 (1989) 166
Lorentz gas, lattice
– Exact generating function for the two-dimensional lattice Lorentz gas - Briozzo et al. 160 (1989) 225

Magnetic susceptibility (see *Paragas, ideal*) 160 (1989) 386
Massive Thirring model (see *Multicomponent nonlinear integrable systems*) 160 (1989) 235
Melting
– A quantum field theory of— - Kitamura 160 (1989) 181
Melting point depression, shear-induced
– Irreversible thermodynamic theory of shear-induced melting point depression - Eu 160 (1989) 87
Melting (see *Liquids, 2D anisotropic*) 160 (1989) 442
Metastable Ising model
– —s in crumpled geometries - Lee 160 (1989) 503
Molecular-dynamics simulation (see *Liquid–vapor interface*) 160 (1989) 166
Multicomponent nonlinear integrable systems
– Linear integral equations and—II - van der Linden et al. 160 (1989) 235
Multifractality (see *Cluster size distribution*) 160 (1989) 43
Multifractality (see *Prime numbers*) 160 (1989) 24

NaPSS (see *Polyelectrolytes, salt-free*) 160 (1989) 135
Noise, Lévy stable (see *Quantum oscillators, coupled*) 160 (1989) 519

O(n) model
– The phase diagram of the— - Blöte and Nienhuis 160 (1989) 121
Oscillators, quantum
– Linearly coupled quantum oscillators with Lévy stable noise - Rybaczuk and Weron 160 (1989) 519

Paragas, ideal
– The magnetized *d*-dimensional ideal paragas - Frota and Bittencourt 160 (1989) 386
Percolation (see *Cluster size distribution*) 160 (1989) 43
Perturbation in evolution (see *Evolution law of dynamical systems*) 160 (1989) 482
Phase diagram of the O(n) model
– The— - Blöte and Nienhuis 160 (1989) 121
Phase-length distributions (see *Intermittent band switching*) 160 (1989) 321
Poincaré's theorem
– Subdynamics and nonintegrable systems - Petrosky and Hasegawa 160 (1989) 351
Poiseuille flow, plane
– Plane Poiseuille flow: near continuum results for a rigid sphere gas - Loyalka and Hickey 160 (1989) 395
Polar fluids
– Statistical mechanical theory of—for all densities - Zakharov and Aero 160 (1989) 157

Polyelectrolytes, salt-free
– Static light scattering by solution of salt-free polyelectrolytes - Krause et al. 160 (1989) 135
Polystyrene-sulfonate (see *Polyelectrolytes, salt-free*) 160 (1989) 135
Prime numbers
– Multifractality of— - Wolf 160 (1989) 24

Quantum field theory of melting
– A— - Kitamura 160 (1989) 181
Quantum oscillators, coupled
– Linearly coupled quantum oscillators with Lévy stable noise - Rybaczuk and Weron 160 (1989) 519

Random energy model
– Nonexponential relaxation in the— - Koper and Hilhorst 160 (1989) 1
Relaxation, nonexponential (see *Random energy model*) 160 (1989) 1
Rigid sphere gas (see *Poiseuille flow, plane*) 160 (1989) 395

Scaling properties (see *Eden clusters*) 160 (1989) 298
Shear-thinning behaviour (see *Colloidal dispersions*) 160 (1989) 195
Shear-thinning behaviour (see *Colloidal dispersions*) 160 (1989) 205
Shear viscosity, non-Newtonian (see *Colloidal dispersions*) 160 (1989) 195
Shear viscosity (see *Colloidal dispersions*) 160 (1989) 205
Sheared fluids
– Nonequilibrium thermodynamic functions for— - Eu 160 (1989) 53
Sheared liquid (see *Melting point depression, shear-induced*) 160 (1989) 87
Smectic-A–crystal transition
– Weak crystallization theory of smectics - Kats et al. 160 (1989) 98
Smectics
– Weak crystallization theory of— - Kats et al. 160 (1989) 98
Solidification temperature (see *Liquids, 2D anisotropic*) 160 (1989) 442
Star clusters, relativistic
– Hamiltonian formulation of the linearized perturbation equations for the Vlasov–Einstein system of relativistic stellar dynamics - Kandrup 160 (1989) 213
Static light scattering (see *Polyelectrolytes, salt-free*) 160 (1989) 135
Superfluid ^{3}He
– Symmetry breaking patterns in— - Capel and Schakel 160 (1989) 409
Swendsen–Wang simulation (see *Ising spins*) 160 (1989) 310
Symmetry breaking patterns (see *Superfluid ^{3}He*) 160 (1989) 409

^{3}He, superfluid
– Symmetry breaking patterns in superfluid ^{3}He - Capel and Schakel 160 (1989) 409
^{3}He in a magnetic field (see *Superfluid ^{3}He*) 160 (1989) 409

Union space (see *Bethe lattices*) 160 (1989) 43

Vlasov equation, generalized
– A generalized Vlasov equation - Santana et al. 160 (1989) 471
Vlasov–Einstein equation
– Hamiltonian formulation of the linearized perturbation equations for the Vlasov–Einstein system of relativistic stellar dynamics - Kandrup 160 (1989) 213
